

# Banners/IBV/Rich Media & IAS measurement

## General information about IAS Display

Integral Ad Science (IAS) is the global market leader in digital ad verification, offering technologies that drive high-quality advertising media. IAS helps digital advertisers make great impressions, ensuring ads are seen by real people in safe and suitable environments.

**IAS measurement** allows deeper analytics for the programmatic campaigns. With the reporting clients will know about: **Brand safety, viewability, ad environment, invalid traffic performance**. These insights give the opportunity to optimize buying and deliver better results.

| IAS Solution | Explanation                                       |
|--------------|---|
| Blocking     | Display tags with blocking. Requires JS           |
| Monitoring   | Display tags without blocking. Can be JS or image |

If the media partner does not accept Javascript or the Javascript tag is not implemented, viewability measurements cannot be collected.

\*\* Please note that 1x1 trackers cannot collect viewability and cannot be wrapped for blocking.

---

## IAS With Eskimi DSP

Eskimi DSP can offer their clients to opt in for **IAS measurement** solution. The client has to inform their Business Managers. While BMs should confirm IAS tracker implementation with the adops who will be responsible for campaign management and optimization.

From the technical stand point adops need to implement **CM pixel** as a HTML/JS impression tracker. CM pixel is a small piece of code that measures performance and sends back the information to IAS dashboard. CM pixel works for Banners, IBV and Rich Media. Keep in mind that CM pixel is a universal code that doesn't require any changes.

---

## CM Pixel

```

<script type="text/javascript"
src="https://pixel.adsafeprotected.com/jload?anId=931059&advId=Eskimi&campId={campaign_id_enc}&pubId
=
{site_domain_enc}{app_bundle_enc}&chanId={creative_id_enc}&placementId={placement_id}">
</script><noscript>

</noscript>

```

## CM Pixel Implementation Example:

You need to mark check box from as it is shown on screen-below. You can see that check-box on campaign approval page for every campaign.

Pre-optimise historical placement: Exclude only bad

### > Impression performance metrics :

### > Custom impression tracking :

☒ Add IAS CM pixel

Pixel

[+ Add More](#)

HTML/Javascript code

[Insert macro](#)

[Remove](#)

```

1 <script type="text/javascript" src="https://pixel.adsafeprotected.com
  /jload?anId=931059&advId=Eskimi&campId={campaign_id_enc}&pubId
  ={site_domain_enc}{app_bundle_enc}&chanId
  ={creative_id_enc}&placementId={placement_id}"></script><noscript
  ></noscript>

```

Please choose vendor

When the CM pixel is implemented to the campaign you should see the results accumulating on IAS within 1 working day.
