

Guidelines for Checking Self-Service Clients with Incorrect Billing Settings in PowerBI

Objective:

To ensure correct auto-billing settings for self-service accounts, which will result in accurate automatic invoice generation. Sometimes campaigns are run for self-service accounts, but the billing settings under company profile remain configured for managed clients. This task ensures that settings are corrected promptly.

Frequency:

- **Check the report at least twice a month.**
 - **Mandatory check during the last days of the month** before monthly billing to avoid errors.
-

Steps to Follow:

1. **Access the Report** on PowerBi called "Self service deals"

The report can be accessed via this [Power BI link](#).

2. **Filter the Report**

- Look for the "Not Automated Deals Spend Tracking" section.
- Set the **month filter** to "Current" to review the latest data.

3. Identify Accounts

The report will show accounts that have spent money but whose company profile settings are incorrect. These accounts need to be addressed.

4. Update Company Profile Settings on DSP

If accounts are found with incorrect settings, take the following actions in the company profile:

- Change the **auto-billing settings** as required.

Before Changes:

The company profile will show the incorrect settings for managed clients.

The profile should be updated as follows:

- **End of Month Billing** selected.
- **Third Grouping** chosen.
- The appropriate **account for invoice generation** selected.
- Ensure all updates are properly saved and attached to the respective company profiles.

5. Exceptions

- Internal accounts or users, such as *Eskimi - Artem P., Test*, do not require these changes.

Reminder:

This task should be done **at least twice a month** and especially **towards the end of the month** before the monthly billing to ensure no errors in invoice generation.
