

Placement packages

You can choose between placement packages and app/site packages.

How it works

1. Tools -> packages -> select package type -> placement

The screenshot shows a 'New package' form. It has a 'Package name' field, a 'Type' dropdown menu, and a 'Users' dropdown menu. The 'Type' dropdown is open, showing 'Apps/sites' and 'Placements' (which is highlighted in blue). Below the dropdown, there is a file selection area with a 'Choose file' button and a file named 'placement_example.csv'. At the bottom, there are 'Save' and 'CANCEL' buttons.

Placements

Apps/sites

Placements

Choose file placement_example.csv

Users

Select any

Save

CANCEL

2. Upload a list of placement IDs you want to have in the package
 - Placement ID is a numeric value. all other values will be filtered
3. Choose which user(-s) the package should belong to
4. Go to your campaign

5. Choose the package

Blocked traffic %

6. Decide if you want the package included or excluded

Some use cases:

- You have good placements on one campaign that you want to specifically reuse on other campaigns
- You only want to start your campaign on a specific list of packages, and optimise from there
- External trackers give you placements that deliver on required metrics - you can now start campaigns on those placements directly

Limitations

Other package functionality is not supported
