

Launching new banner campaign

Launching campaigns on Eskimi DSP can be a bit tricky, so here you can learn how to set up a new banner ad campaign in 7 easy steps.

IMPORTANT: Before setting up your campaign, your creatives should already be uploaded and ready to use. Find out how to upload creatives to DSP in [this article](#).

Step 1: Log in to your DSP account, select Campaigns, and click " New campaign group ".

Form navigation

- Name & Type
- Launch date & Budget
- Location & Audiences
- Platforms, Telco & Devices
- Optimisations, deals & packages
- Landing & Creatives
- Buttons

Step 3: Write the name of your campaign, enter the start and end dates, bid, total budget and the system will suggest your daily budget which can be edited by you if you prefer a different value than the one that was suggested by the system. In Time scheduling you can set up time targeting (select specific hours of the day when your campaign should be displayed).

The screenshot displays a campaign setup interface. The main form is divided into three sections: 'Name & Type', 'Launch date & Budget', and 'Location & Audiences'. The 'Name & Type' section includes a platform selection (Facebook), a type dropdown (Banner), and a campaign name field. The 'Launch date & Budget' section contains a date picker, a link to 'Time and day scheduling', and input fields for Bid (CPM), Daily budget, and Total budget, each with a dollar sign and a default value. A checkbox for 'Start campaign after approval' is also present. The 'Location & Audiences' section features a country dropdown (Select Any) and links to 'City' and 'State/Country'. A sidebar on the right, titled 'Form navigation', lists the sections: Name & Type, Launch date & Budget, Location & Audiences, Platforms, Telco & Devices, Optimisations, deals & packages, Landing & Creatives, and Buttons. The 'Name & Type' section is currently selected.

Step 4: Select your target country. In the Platforms, Telco & Devices section you can also target users by mobile operators, device types, browsers, etc. If you don't use any specific targeting, just leave the default values in these options.

Step 5: Set up values for Impression capping and Auto-optimisation. These tools are important for the good performance of your campaign.

- *Impression capping* means the number of impressions and clicks that a user can see in a given time frame. In the example photo below we see that the user can view your ad a maximum of 3 times per 24 hours and will be able to click on it once, each impression will be shown not often than 1 impression per 1 hour. You can make it less or more frequent depending on what you want to achieve: if your main goal is Awareness - you should make capping frequent, as frequent as 3 impressions in 5 minutes or so. If your main goal is Lead generation - you can make capping a little less frequent - maybe 1 impression in 20 hours or so.
- *Auto-optimisation* here you can choose your optimization metric (CPC, CTR, or CPA) depending on the type of your campaign. For basic banner ad campaigns choose default optimization as shown in the example picture below.

Step 6: CLICK URL: Here you can choose the destination of where the user lands once he or she clicks on your banner.

- If you're choosing a basic landing page, don't forget to include https:// before your site name.
- If it's an Android App download you'll have to enter your Google Play Store ID.
- If it's a Click to action: Call you'll have to enter an international phone number or a short-code (eg. +123456789).
- If it's a Click to action: SMS you'll have to enter an international phone number or a short-code as well as an SMS text accompanying your banner (eg. Start Now).
- If it's a Click to action: USSD you'll have to enter USSD code (eg. *999*1#).

Also, don't forget to enter an ad domain that is related to your site URL.

The screenshot displays the 'Landing & Creatives' form. In the 'Click URL' section, the 'Landing page' field contains 'https://www.yoursite.com/'. A red box highlights the '> Click URL parameters' link, and a red arrow points to the 'Add UTM parameters' button. Below this, the 'Selected creative sets' section shows two test creatives, each with a bid of 0.4. A 'Save' button is at the bottom. An inset window shows the 'Click URL parameters' dialog, which includes fields for 'UTM source' (eskimi), 'UTM medium' (cpm), 'UTM campaign' ((campaign_title)), 'UTM term' ((creative_size)), and 'UTM content' (eskimidsp_(site_id)).

We also recommend adding UTMs parameters for better tracking. These can be automatically added to the landing page of your campaign by clicking on Click URL parameters and choosing Add UTM parameters as in the screenshot below.

Why to use UTMs? UTMs are essential part of external analytics. With the help of UTMs platforms like Google Analytics will be able to identify Eskimi traffic and performance. This means that clients will be able to better evaluate their multi-channel campaigns and compare the results between different sources.

Step 7: Select the creative set for your campaign. The bids for each creative will be automatically applied based on the bid that you've entered at the beginning of the campaign setup. Of course, you can set different bids per each creative manually if it's needed.

Form navigation

Buttons

- **Pending** campaigns are ready to be launched, they just need to be approved by administrators.
- **The daily cap** means the campaign has already used up all of its daily budget and is now paused until the next day.
- **Live** campaigns are currently running.
- **Stopped** means that the campaign has been paused manually.
- **Rejected** means that the exchanges have rejected this campaign and prevented it from running because it did not meet the necessary requirements.
- **Deleted** means that the campaign was deleted manually.

- **Budget limit** means the campaign has already used up all of its total budget and it cannot run anymore.
 - Expired campaigns are the ones that have already ended.
 - **Ready** means the campaign has already been set up and approved, however, its launch date is set to start in the future.
