

Launching new banner campaign

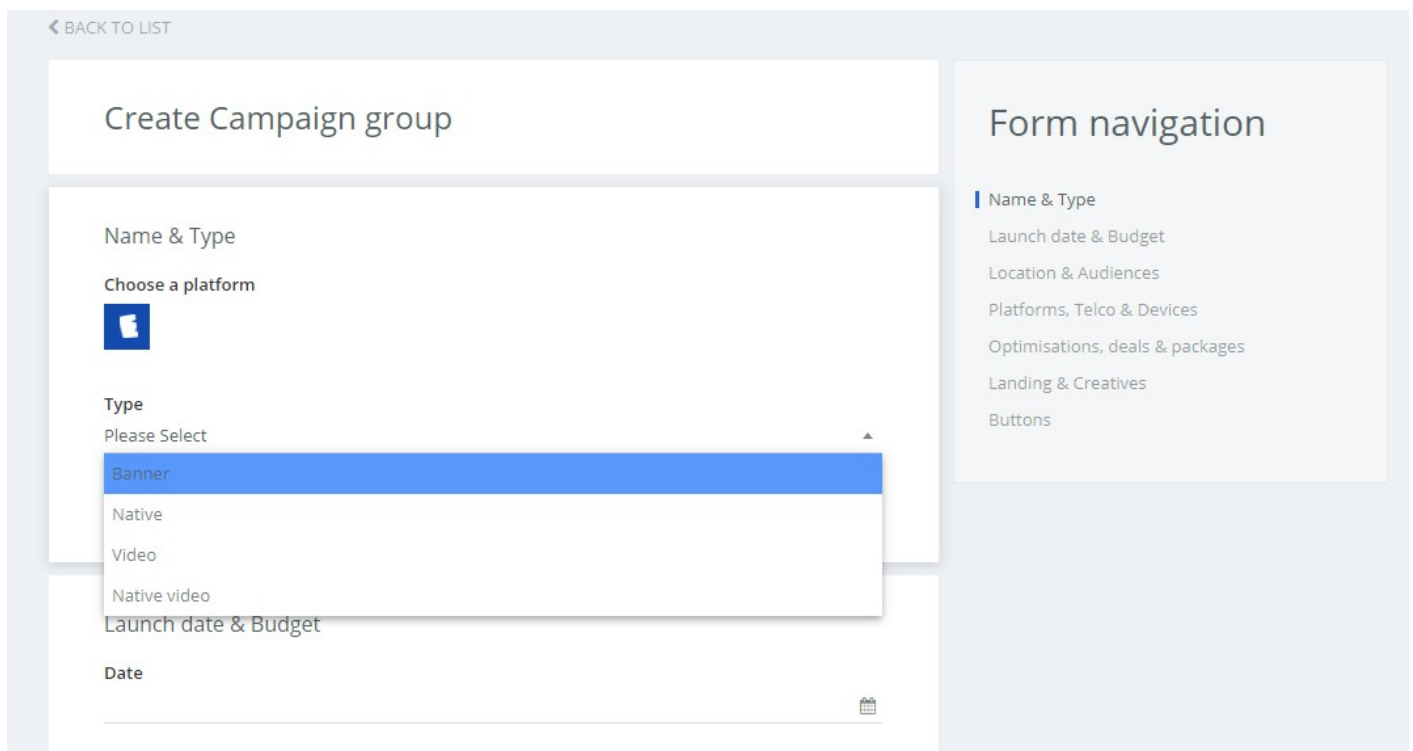

Launching campaigns on Eskimi DSP can be a bit tricky, so here you can learn how to set up a new banner ad campaign in 7 easy steps.

IMPORTANT: Before setting up your campaign, your creatives should already be uploaded and ready to use. Find out how to upload creatives to DSP in [this article](#).

Step 1: Log in to your DSP account, select Campaigns, and click " New campaign group ".

Launch date & Budget

Date

Form navigation

- Name & Type
- Launch date & Budget
- Location & Audiences
- Platforms, Telco & Devices
- Optimisations, deals & packages
- Landing & Creatives
- Buttons

Step 3: Write the name of your campaign, enter the start and end dates, bid, total budget and the system will suggest your daily budget which can be edited by you if you prefer a different value than the one that was suggested by the system. In Time scheduling you can set up time targeting (select specific hours of the day when your campaign should be displayed).

The image shows a web interface for setting up a campaign. On the right is a sidebar titled "Form navigation" with a list of steps: "Name & Type" (highlighted with a blue bar), "Launch date & Budget", "Location & Audiences", "Platforms, Telco & Devices", "Optimisations, deals & packages", "Landing & Creatives", and "Buttons".

The main content area is divided into three sections:

- Name & Type:** Includes a "Choose a platform" section with a Facebook icon, a "Type" dropdown menu set to "Banner", and a "Campaign name" text input field.
- Launch date & Budget:** Includes a "Date" field with a calendar icon, a link "> Time and day scheduling", and three budget fields: "Bid (CPM)" with value "0.4", "Daily budget" with value "100", and "Total budget" with value "500". All budget fields have a "\$" symbol. There is a checkbox labeled "Start campaign after approval" which is checked.
- Location & Audiences:** Includes a "Country" dropdown menu set to "Select Any", and links "> City" and "> State/Country".

Step 4: Select your target country. In the Platforms, Telco & Devices section you can also target users by mobile operators, device types, browsers, etc. If you don't use any specific targeting, just leave the default values in these options.

Step 5: Set up values for Impression capping and Auto-optimisation. These tools are important for the good performance of your campaign.

- *Impression capping* means the number of impressions and clicks that a user can see in a given time frame. In the example photo below we see that the user can view your ad a maximum of 3 times per 24 hours and will be able to click on it once, each impression will be shown not often than 1 impression per 1 hour. You can make it less or more frequent depending on what you want to achieve: if your main goal is Awareness - you should make capping frequent, as frequent as 3 impressions in 5 minutes or so. If your main goal is Lead generation - you can make capping a little less frequent - maybe 1 impression in 20 hours or so.
- *Auto-optimisation* here you can choose your optimization metric (CPC, CTR, or CPA) depending on the type of your campaign. For basic banner ad campaigns choose default optimization as shown in the example picture below.

Step 6: CLICK URL: Here you can choose the destination of where the user lands once he or she clicks on your banner.

- If you're choosing a basic landing page, don't forget to include https:// before your site name.
- If it's an Android App download you'll have to enter your Google Play Store ID.
- If it's a Click to action: Call you'll have to enter an international phone number or a short-code (eg. +123456789).
- If it's a Click to action: SMS you'll have to enter an international phone number or a short-code as well as an SMS text accompanying your banner (eg. Start Now).
- If it's a Click to action: USSD you'll have to enter USSD code (eg. *999*1#).

Also, don't forget to enter an ad domain that is related to your site URL.

The screenshot displays the 'Landing & Creatives' form. In the 'Click URL' section, the 'Landing page' dropdown is set to 'https://www.yoursite.com/'. Below this, a red box highlights the '> Click URL parameters' link. Three buttons are visible: 'Insert macro', 'Add parameter', and 'Add UTM parameters', with a red arrow pointing to the last one. The 'Selected creative sets' section shows two test banners with a bid of 0.4 CPM. A modal window titled 'Landing & Creatives' is open, showing the 'Click URL' section with the URL 'https://www.yoursite.com/?utm_source=eskimi&utm_medium=cpm&utm_campaign=(campaign_title)'. The modal also lists UTM parameters: 'utm_source' (eskimi), 'utm_medium' (cpm), 'utm_campaign' ((campaign_title)), 'utm_term' ((creative_size)), and 'utm_content' (eskimidsp_(site_id)). At the bottom of the modal are buttons for 'Insert macro', 'Add parameter', and 'Remove UTM parameters'. The main form has a 'Save' button and a 'CANCEL' link at the bottom.

We also recommend adding UTMs parameters for better tracking. These can be automatically added to the landing page of your campaign by clicking on Click URL parameters and choosing Add UTM parameters as in the screenshot below.

Why to use UTMs? UTMs are essential part of external analytics. With the help of UTMs platforms like Google Analytics will be able to identify Eskimi traffic and performance. This means that clients will be able to better evaluate their multi-channel campaigns and compare the results between different sources.

Step 7: Select the creative set for your campaign. The bids for each creative will be automatically applied based on the bid that you've entered at the beginning of the campaign setup. Of course, you can set different bids per each creative manually if it's needed.

- **Budget limit** means the campaign has already used up all of its total budget and it cannot run anymore.
 - Expired campaigns are the ones that have already ended.
 - **Ready** means the campaign has already been set up and approved, however, its launch date is set to start in the future.
